

Modeling Information Narrative Evolution on Telegram During the Russia-Ukraine War

A Dynamic Clustering Approach to Real-Time Narrative Detection and Analysis

Authors: Patrick Gerard^{1, 2}, Svitlana Volkova², Louis Penafiel², Kristina Lerman¹, Tim Weninger³

Russian articles about Ukraine that mention Nazism

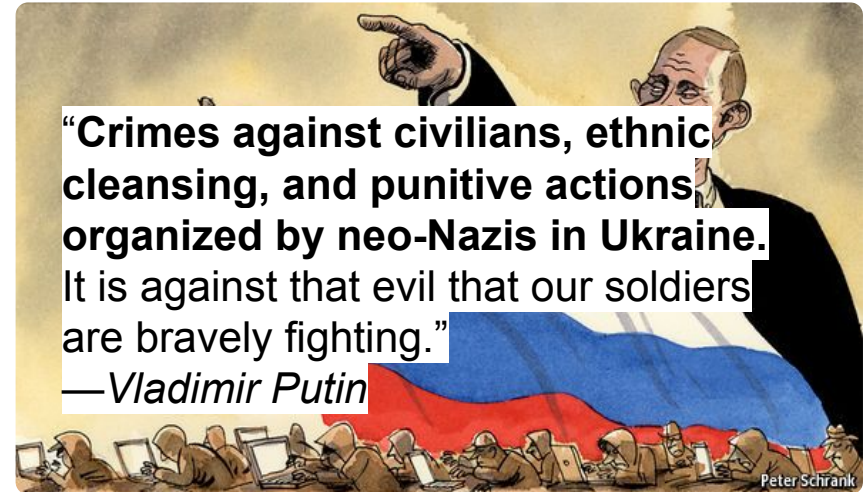

Source: Semantic Visions

Feb 24, 2022: "Denazification" narrative explodes in Russian Media

March 2022: Stories evolve from abstract claims to "Nazis using human shields"

April 2022: Mariupol siege becomes "destroying Nazi stronghold" justification

May 9, 2022: Putin's Victory Day speech - "fighting so there's no place for Nazis"

Feb 24, 2022: "Denazification" narrative explodes in Russian Media

March 2022: Stories evolve from abstract claims to "Nazis using human shields"

April 2022: Mariupol siege becomes "destroying Nazi stronghold" justification

May 9, 2022: Putin's Victory Day speech - "fighting so there's no place for Nazis"

*The narrative shifts are
**rapid, coordinated,
and measurable...***

Information Warfare is the New Battlefield

*Narratives **shape**
public opinion and
policy decisions.*

*Real-time **propaganda**
influences global
perceptions of conflict.*

Data Source and Scope: Telegram Warbloggers

Posts from **Russian- and Ukrainian-leaning Telegram channels**

Collected from **Oct 2015–Aug 2023**

Final analysis focused on **~8.6M posts** from **568 channels**

→ **243 pro-Ukrainian** (4.2M posts)

→ **325 pro-Russian** (4.4M posts)

Data primarily in **Russian and Ukrainian**

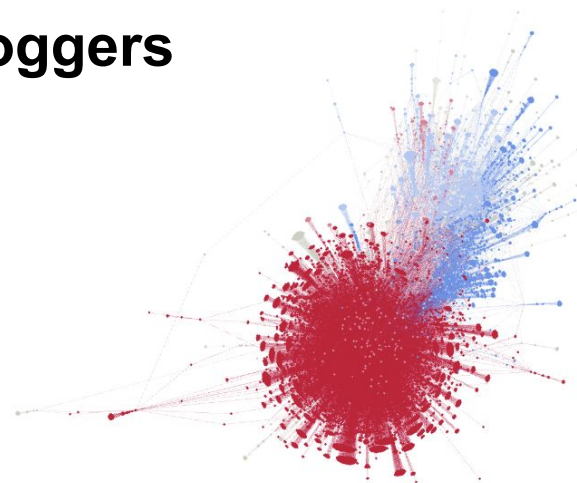

Co-reference network of Telegram warbloggers. Nodes represent channels, colored by inferred stance:

- **Pro-Russian** (red),
- **Pro-Ukrainian** (blue),
- **Unaffiliated/Neutral** (grey)

Data Source and Scope: Telegram Warbloggers

What stories do these communities tell themselves about the war?

How do these stories change?

Co-reference network of Telegram warbloggers. Nodes represent channels, colored by inferred stance:

- **Pro-Russian** (red),
- **Pro-Ukrainian** (blue),
- **Unaffiliated/Neutral** (grey)

Our Approach - Step 1

OnlineAgglo:

*Real-time hierarchical clustering that tracks how narratives **split, merge, and evolve** as new posts arrive. Captures the **dynamic lifecycle** of narratives at scale.*

"Why does Ukraine have so many US-funded biological research facilities?"

"Documents confirm: Pentagon developing biological weapons in Ukrainian labs targeting Russian DNA"

Our Approach - Step 1

OnlineAgglo:

*Real-time hierarchical clustering that tracks how narratives **split, merge, and evolve** as new posts arrive. Captures the **dynamic lifecycle** of narratives at scale.*

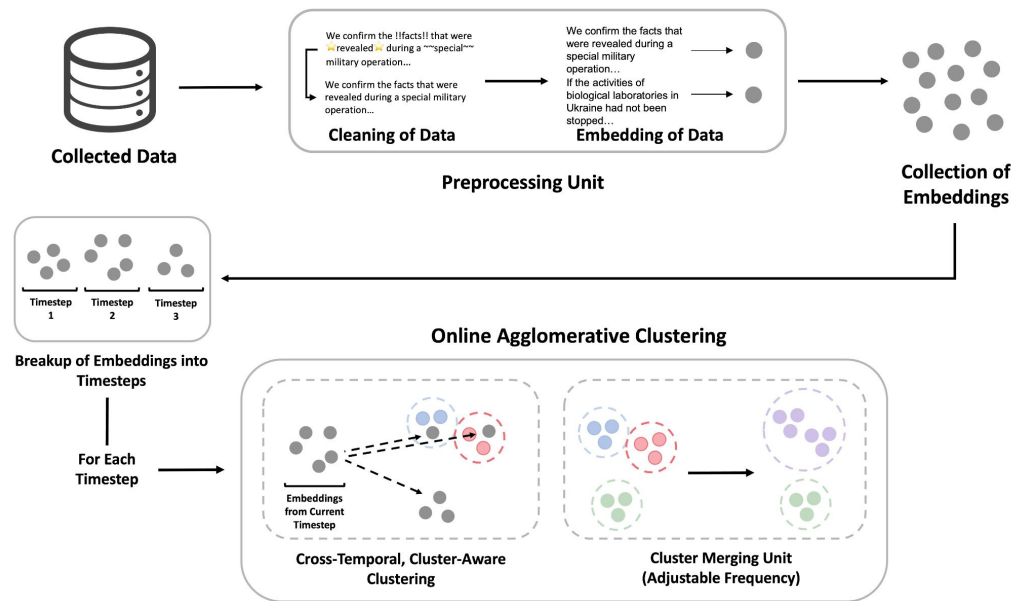

"Hunter Biden's Metabiota company funded gain-of-function research in Mariupol biolab - evidence recovered by our forces"

"Ukrainian biolabs were preparing ethnic bioweapons for genocide of Russians in Donbas - this is why we had to act"

Our Approach - Step 1

OnlineAgglo:

*Real-time hierarchical clustering that tracks how narratives **split, merge, and evolve** as new posts arrive. Captures the **dynamic lifecycle** of narratives at scale.*

Our Approach - Step 2 (Optional)

MacroNarrative:

*Human-in-the-loop framework that combines related narrative clusters into coherent **macro-narratives**, tracking how overarching **themes drift and mutate** across time.*

Creation of candidate seed cluster set via BFS-inspired discovery process seeking clusters like other candidate clusters.

Our Approach - Step 2 (Optional)

MacroNarrative:

*Human-in-the-loop framework that combines related narrative clusters into coherent **macro-narratives**, tracking how overarching **themes drift and mutate** across time.*

Human inspection of each seed candidate across every timestep.

Timestep 0: Cluster 2 - 125 Texts

Text 1: "Let them now tell the world community that the American military was developing it in the Pentagon's biological laboratories in the territories of Ukraine and other former Soviet republics."

Text 2: "Statements by a State Department representative indicate Washington's fears that a violation of the Biological Weapons Convention by Ukraine and the United States will be confirmed, said Russian Ambassador to Washington Anatoly Antonov."

Timestep n: Cluster 2 - 207 Texts

Text 1: "They reported that everything necessary to continue the implementation of the US military-biological program has already been taken out of Ukraine."

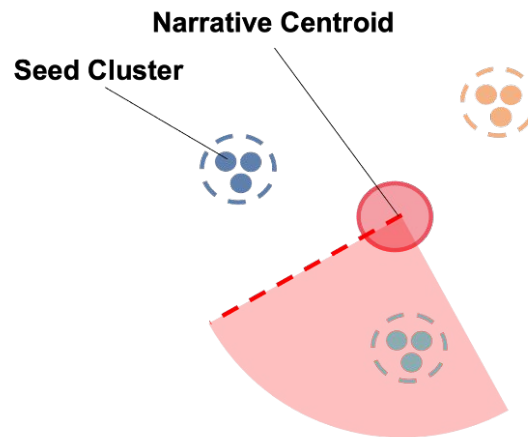

Text 2: "New evidence of the presence of American biological laboratories in Ukraine."

Our Approach - Step 2 (Optional)

MacroNarrative:

*Human-in-the-loop framework that combines related narrative clusters into coherent **macro-narratives**, tracking how overarching **themes drift and mutate** across time.*

Formation of dynamic Macro-Cluster using refined seed clusters.

Key Findings

Divergent Focus Patterns

*Ukrainian narratives emphasize **military/war** and international politics, while Russian narratives focus heavily on **international politics** and internal politics.*

| Community | Military/War | Politics | |
|-----------|--------------|----------|---------------|
| | | Internal | International |
| Ukrainian | 46.5% | 9.3% | 44.2% |
| Russian | 16.7% | 31% | 52.4% |

Theme breakdown of trending clusters each week.

Key Findings

Disagreement over Reality

*When both communities do discuss the same topic, their respective perceptions are **dramatically different.***

Bucha Massacre:

Russian troops committed a massacre in Bucha.

Top Micro-Narratives:

- Russian Atrocities
- Ukrainian Resistance
- International Diplomacy
- Humanitarian Crisis
- Information Warfare
- War Crimes Accountability
- Economic Impact
- Bucha Refugees

Key Findings

Disagreement over Reality

*When both communities do discuss the same topic, their respective perceptions are **dramatically different.***

Bucha Massacre:

There was not any “Bucha Massacre” committed by Russian troops.

Top Micro-Narratives:

- Bucha Event Doubts
- Media Manipulation
- International Report Challenges
- Alternative Narratives
- Critique of Ukraine's Role
- Evidence Credibility

Key Findings

Narrative Structural Diversity

*Narratives are **internally complex**.*

*The relative use of each theme changes **dramatically across time**.*

Example Ukrainian Macro-Narrative

Russian troops committed a massacre in Bucha.

Top Micro-Narratives:

- Russian Atrocities
- Ukrainian Resistance
- International Diplomacy
- Humanitarian Crisis
- Information Warfare
- War Crimes Accountability
- Economic Impact
- Bucha Refugees

Key Findings

Narrative Structural Diversity

*Narratives are **internally complex**.*

*The relative use of each theme changes dramatically **across time**.*

Example Russian Macro-Narrative

Ukraine must be denazified.

Top Micro-Narratives:

- Ukrainian Neo-Nazism
- WWII History Revision
- Russian Anti-Nazi Stance
- Western Support
- Neo-Nazi Impact
- Ukrainian War Crimes
- Civilian Effects

Key Findings

Narrative Structural Diversity

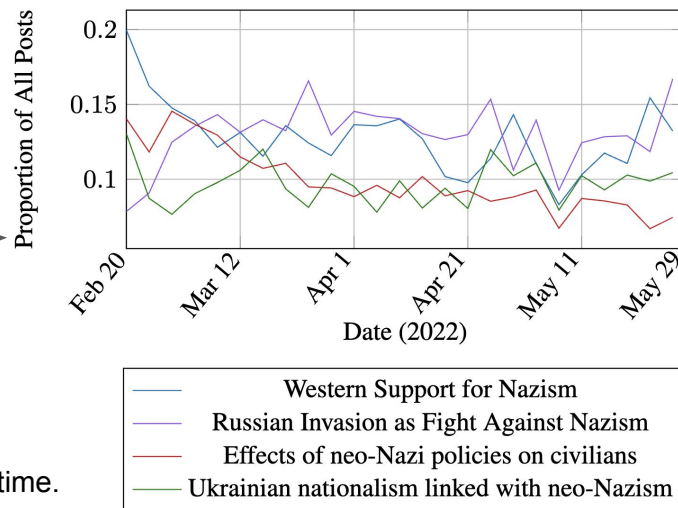

*Narratives are **internally complex**.
The relative use of each theme changes
dramatically **across time**.*

Micro-narrative proportion over time.

Example Russian Macro-Narrative

Ukraine must be denazified.

Top 4 Themes in Russian Denazification Narrative

Key Takeaways: Modeling Information Narrative Detection and Evolution

Dynamic Narrative Tracking at Scale

We introduce adaptive clustering framework for real-time narrative evolution, **capturing 93.2% accuracy** in identifying trending stories that match external events.

Complex Internal Narrative Mechanics

Narratives exhibit intricate structural diversity and adaptive temporal patterns—**surging and dormant phases** driven by external triggers, revealing sophisticated internal evolution mechanisms.

Fundamentally Different Realities

Russian and Ukrainian communities construct entirely separate information worlds: divergent event priorities, contrasting temporal responses, and **opposing interpretations of identical events** like Bucha point towards irreconcilable narrative universes.
